

## **Do Not Order a Multi-Domain Psychodiagnostic Test, Such as The Minnesota Multiphasic Personality Inventory (MMPI) À La Carte**

To ensure accurate and clinically relevant assessment, referring clinicians should request a complete "clinical psychological evaluation" (not just "MMPI" or a single psychological test à la carte).

Clinical psychological evaluations are conducted by a qualified master's or doctoral-level clinical psychologist, and involves a detailed clinical interview, followed by a well-judged test selection process. In settings lacking such expertise, the risk of misdiagnosis and unnecessary expenses increases.
